

TITLE OF THE ARTICLE

First author's name, surname and affiliation, Second author's name, surname and affiliation

Abstract

The abstract should be no longer than 15 lines (format: normal, type size - 12, font - Times New Roman, Justified).

Keywords: *Keyword1, Keyword2, Keyword3, (max. 6 keywords)*

JEL Classification: JEL Code1, JEL Code2 (max. 3) www.aeaweb.org/jel/guide/jel.php

AMS Classification: AMS Code1, AMS Code2 (max. 3)

<https://mathscinet.ams.org/msc/msc2010.html>

1 TITLE OF THE SECTION

Main body of the text: Times New Roman, 12pt, regular, with following paragraph parameters:

- A4 sized paper should be used
- Margins: left – 25 mm, right – 25 mm, top – 30 mm, bottom – 20 mm
- Spacing: Before: 0, After: 0
- Line Spacing: 1
- Alignment: Justified
- Indentation: Left: 0, Right: 0, Special: 0.
- Style: Normal (not Title, Heading1, Heading2, Body Text, etc.!)

Leave an empty line between paragraphs.

1.1 Title of the section

Main body of the text: Times New Roman, 12pt, regular, with following paragraph parameters:

- A4 sized paper should be used
- Margins: left – 25 mm, right – 25 mm, top – 30 mm, bottom – 20 mm
- Spacing: Before: 0, After: 0
- Line Spacing: 1
- Alignment: Justified
- Indentation: Left: 0, Right: 0, Special: 0.
- Style: Normal (not Title, Heading1, Heading2, Body Text, etc.!)

Leave an empty line between paragraphs.

Tables have to be centred, numbered continuously, and referenced in the text. Tables should not be wider than the margins of the paper. Leave an empty line before and after each table.

Figures have to be centred, numbered continuously, and referenced in the text. The title of figures should appear immediately below the figure. Figures should not be wider than the margins of the paper. Leave an empty line before and after each figure. Figures will not be redrawn by the publisher. Figures should be high-quality grayscale graphics (please, do not use colors): vector drawings (with text converted to curves) or 300 dpi bitmaps.

Mathematical expressions have to be centered and right-numbered continuously inside the parenthesis, while all variables and parameters must be defined.

$$y^* = \exp\left(\frac{\alpha_0 + \alpha_1 \ln(N\sigma P)}{1 - \alpha_2}\right) \quad (1)$$

2 CONCLUSIONS

This section should include the conclusions of the article. Please, follow all the instructions for writing articles.

References

References that follow have to be alphabetically sorted and should follow the introduced style.

All references must meet **Harvard style** <https://www.mendeley.com/guides/harvard-citation-guide/>
For citation please use:

- Professional citation software or
- free Harvard citation generator <https://www.citethisforme.com/citation-generator/harvard>
- or webpage <https://scholar.google.com/>

The screenshot shows a Google Scholar search for 'dantzig linear programming'. The results list several books and articles. A citation popup is open, showing the Harvard citation style for 'Linear programming 1: introduction' by Dantzig, G.B. and Thapa, M.N. (2006). The citation is highlighted with a yellow box. The popup also shows other citation styles like MLA, APA, Chicago, and Vancouver, and options to download the citation in BibTeX, EndNote, RefMan, or RefWorks.

Google Scholar search results for 'dantzig linear programming'.
